Universes

In SIPP data, values of “Not in universe” are ' . ' (period) for numeric-type variables and ' ' (blank) for character-type variables. Although most universe statements reference public-use variables, some universes contain variables that are not available to the public. These variables include:

- EPPMIS1-12: Respondent’s interview status for month {1...12}
- LAST_MONTH: Last month in household for partial-period household members who left before the interview date in Waves 2+

Status Flag Values

0. Not in universe
1. In universe; as reported
2. Statistical imputation (hot deck)
3. Logical imputation
4. Model-based imputation
5. Cold deck
6. Imputed from a range
7. Combination of 1 and 2/3/5/6
8. Combination of 2/3/5/6
9. Can be determined from the allocation flags for the components of this recode

Summary Statistic Variables

When topcoding assets, earnings, hours worked, and medical expenditures, outliers at the top of the distribution are replaced by the mean or median of the selected outlier values. When bottomcoding assets and earnings variables with negative values, outliers at the bottom of the distribution are replaced by the maximum of the selected outlier values. Each variable has a set of corresponding summary statistic variables that display additional information about the distribution of topcoded values. These variables end in __MEAN (mean), __MED (median), and __STD (standard deviation) and are only in universe for topcoded and bottomcoded cases.

Most summary statistic variables hold values that describe the overall distribution of topcoded cases, however, some variables display separate statistics by demographic group. These groups are defined differently depending on how the data was collected - at the person or person-month level, or at the household level.

Person and person-month level variables with summary statistics by demographic group include, and are not necessarily limited to: TJB(1-7)_ANNSAL(1-3), TJB(1-7)_HOURLY(1-3), TTHR401VAL, TOCHKVAL, and TOSAVVAL.

Demographic groups for these variables are defined as follows:

- Male, White non-Hispanic
- Male, Black/Asian/Other or Hispanic
- Female, White non-Hispanic
- Female, Black/Asian/Other or Hispanic

Household level variables with summary statistics by demographic group include, and are not necessarily limited to: TPRVAL, TRENTMORT, TUTILS, TVEH(1-3)DEBTVAL, and TVEH(1-3)VAL.

Demographic groups for these variables are defined based on the following characteristics of the household reference person:

- Married (spouse present), White non-Hispanic
- Married (spouse present), Black/Asian/Other or Hispanic
- Unmarried, White non-Hispanic
- Unmarried, Black/Asian/Other or Hispanic

As a general rule, users wanting to determine whether a particular summary statistic variable describes the overall distribution of topcoded cases or the within-group distribution of topcoded cases should consult the distribution of that summary statistic variable's non-missing cases. If the summary statistic variable has the same value for all of its non-missing cases, that summary statistic describes the overall distribution of topcoded cases. If the summary statistic variable takes does not have the same value for its non-missing cases, those summary statistics describe the within-group distribution of topcoded cases.

A note about weeks and XWKA(i) variables in select Labor Force Recodes

Many labor force recodes describe values for certain weeks of the year (ex. RWKESR1, RJB1_WKSUM1, etc.). These recodes refer to weeks (Sunday through Saturday) that contain 4+ days in the reference month, starting with the first 4+ day week. This is very similar to what was done in older SIPP panels. Variables XWKA1-XWKA5 are used to set universes for these recodes. These variables indicate the week number of the reference year for each week in the reference month containing 4+ days, and are consistent across all records. For example, the first calendar week of August 2013 has only three days (the 1st-3rd), so XWKA1 for August 2013 is the week starting the 4th, and has a value of 32 (being defined the 32nd week of the year). Although not included as variables on the public files, a more detailed description of the XWKA(i) variables can be found in the User's Guide at <https://www.census.gov/programs-surveys/sipp/guidance/users-guide.html>. Note that week 1 of the year will contain more than seven days when the first calendar week of the year has 3 or fewer days, such as occurred in January 2015. Similarly, week 52 of the year

will contain more than seven days when the last calendar week of the year has 3 or fewer days, such as occurred in December 2013. Additionally, for earnings variables where the last calendar week in the month has less than 4 days, values for those days are carried into the first week of the next month (and vice-versa to the previous month where the first calendar week has less than 4 days). Also note that this does not affect monthly sums (ex. RJB1_MSUM), which account for every day in the month.
